**Paris, France — Relocating to Canada with sponsored work permit**

Full Stack Developer with 5 years of experience in web development. I have focused my career on designing modern and robust web applications using various technologies such as React, Next.js, Laravel, Symfony, Node.js, and TypeScript.

## Technical Skills

|                           |                                                                                       |
|---------------------------|---------------------------------------------------------------------------------------|
| <b>Architecture</b>       | Clean Architecture                                                                    |
| <b>Languages</b>          | TypeScript, PHP, Python                                                               |
| <b>FrontEnd</b>           | React, React Native (Expo), Next.js, Astro, TailwindCSS                               |
| <b>BackEnd</b>            | Symfony, Laravel, Node.js, REST API, WebSockets, Supabase, MySQL, PostgreSQL          |
| <b>Tools</b>              | Docker, Coolify (self-hosted), Git, DiscordJS, Webpack, Vite, Postman, Insomnia, PEST |
| <b>Project Management</b> | SCRUM, Kanban (Jira, Trello), Agile methodologies                                     |
| <b>Communication</b>      | French, English (professional)                                                        |

---

## Experience

**Fullstack Developer** September 2021 - Present  
CPAM (Caisse Primaire d'Assurance Maladie) — Health Insurance — Versailles, France

- Symfony, React, PostgreSQL
- Built several internal applications within CPAM, such as
  - Company-wide dashboard: company news, links to internal apps, 30+ forms auto-routing to categorized GLPI ticket creation via email, and app tutorials.
  - Meeting room booking system
  - Gym sign-up system
  - HR forms
  - Strike-tracking system for managers and HR
- Harmonized UX/UI across the different applications for a consistent experience between tools.
- Migrated 11 years of data (3,000+ rows, multiple tables) to a new schema, with an automated purge every 33 months.
- Applications used weekly by ~851 employees (Matomo data).

---

## Education

**Master's Degree IW (Web Engineering)** 2024 - 2026  
ESGI — Paris, France

**Relevant courses:** Clean Architecture, DevOps, web security, container clustering, hackathon.

---

# Projects

**Together** — CTO

April 2026 - Present

Website: [App Store](#)

iOS app for couples, built to nurture the relationship daily in 2 to 5 minutes: emotional check-ins, themed challenges (communication, closeness, intimacy), time capsules and a shared journal. Having joined as CTO after the v1 launch, I took ownership of the technical rebuild — restructuring the codebase, hardening the architecture and shipping new features.

**Impact:** -47% app size (150MB → 80MB).

**Technical stack:** Expo, React Native, Supabase, PostgreSQL, PostHog.

**Traacker** — Micro SaaS

August 2025 - Present

Website: [traacker.mathistassart.fr](https://traacker.mathistassart.fr)

Tracks price changes at [Boulanger](#) and [Fnac](#), with customizable email alerts (daily, weekly, or monthly). Laravel 12 backend with scheduled jobs via Laravel Scheduler, Inertia.js and React frontend. More retailers are planned.

**Technical stack:** Laravel, Inertia.js, React, PostgreSQL.
